Expected Effect

The outcomes of this consultation will support improving the usability of Open Data and enhancing the beneficiary experience, enabling more efficient and effective access to and use of data.

a question

Which aspect do you consider the highest priority for enhancing the presentation of Open Data?

- Improve data organization and classification.
- Provide data in more reusable formats.
- Improve data descriptions and metadata.

Participation Results

A total of 16 participants took part in the consultation. The results showed that “Improving Data Descriptions and Metadata” ranked first, receiving 8 votes (50%). This was followed by “Providing Data in More Usable Formats”, which received 6 votes (37.5%), while “Improving Data Organization and Classification” received 2 votes (12.5).

Participation Results

The consultation results showed that half of the participants considered improving data descriptions and metadata to be the top priority for enhancing the presentation of open data. This reflects the importance of presenting data in a clearer and more comprehensible manner for beneficiaries.

The results also showed that 37.5% of participants placed priority on providing data in formats that are more suitable for use and reuse, while 12.5% prioritized improving data organization and classification.

Overall, the findings indicate that the primary area for improvement is to enhance the clarity of open data and the associated metadata, thereby helping beneficiaries better understand the content and purpose of datasets and make more effective use of them.

Analysis of Participation

Recommendations

Based on the consultation results, it is recommended to prioritize improving data descriptions and metadata, as this option received the highest percentage of votes at 50%, while considering the results of the other options as inputs for future improvement initiatives.

Decisions and Actions Derived from the Consultation

Improving data descriptions and metadata has been adopted as a priority area for the development of open data, based on the results of beneficiary participation. Implementation of the related improvements will commence during the first and second quarters of 2027.

Improvement Action

Review the targeted open datasets and improve their descriptions and associated metadata to enhance the clarity of data content and enable beneficiaries to better understand the datasets and access the information necessary to make effective use of them.

Impact Measurement

The impact of the improvement action will be measured following implementation by assessing the percentage of targeted datasets whose descriptions and metadata have been improved, as well as verifying the completeness and clarity of the accompanying descriptive information.
